**Description**

With play opportunities dispersed along the curving amenity center trail, the Nature Play Space™ at Siena is a one-of-a-kind experience. During their journey, visitors will encounter grassy mounds, offering a unique place for relaxation or active exploration. As the path meanders, children and adults will be drawn to the sight of insects and birds engaging with habitat features and native vegetation. Various play equipment options provide opportunities for children to test climbing and balancing skills, while the open lawn offers space for unstructured play. With two gathering spaces and dispersed boulder seating, people are encouraged to stop and spend time in the space. This is truly a multi-generational play environment that offers something new to discover on each visit. Play equipment cutsheet is on sheet LC.C2, and it is located on the sheet LC.2 of the construction plans.
